

AspireTM

A New Kind of K

AspireTM is the first-of-its-kind micronutrient-enhanced potash fertilizer. Formed using innovative NutrifarmTM technology, Aspire premium potash with Boron combines potassium and boron in each granule to help achieve balanced crop nutrition and meet the growing need for micronutrients in crops like corn, soybeans, alfalfa and cotton.

Uniform Nutrient Distribution

Aspire with Boron (0-0-58-0.5B) is formulated to meet the need for boron nutrition. Through the innovative Nutriform™ manufacturing process, potassium and boron are combined into one granule, ensuring uniform nutrient distribution when applied in a broadcast application. Aspire with Boron nourishes plants at the root level so nutrients are available when and where plants need them.

Higher Yield Potential and ROI

The first-of-its-kind, Aspire micronutrient-enhanced potash increases yields and return on investment. By providing essential nutrients at the right time and

distributing them evenly across the field, Aspire delivers maximized yields and increased profitability for your advanced crop production operation.

Increased Efficiency

Aspire micronutrient-enhanced potash provides increased operational efficiency over traditional granular blend applications. As a foundational soil-applied fertilizer that can be spring- or fall-applied, Aspire complements other in-season applications. By combining potash and boron in one granule, Aspire with Boron reduces the risk of uneven application, improving nutrient use for maximum yields.

WHY BORON?

Boron is critical in achieving balanced crop nutrition in high-yield systems. It is needed throughout the growing season to improve heat and drought stress, crop quality and pollination.

Directions for Use

Crop	Product Application Rate (lbs/ac)	B Rate (lbs/ac)	Maximum B Application for Season (lbs/ac)	Method
Alfalfa	0-300	0-1.5	4	Broadcast
Corn Cotton Soybeans	0-200	0-1	2	Broadcast

Innovation by The Mosaic Company

The Mosaic Company leads the industry in crop nutrition innovation with a portfolio of micronutrient-enhanced products, including Aspire™ premium potash and MicroEssentials® premium phosphate fertilizer.

WARNING: Contains boron. Use of boron may result in crop injury. **DO NOT** place this product in direct contact with the seed. Use in accordance with recommendations of a qualified individual or institution, such as, but not limited to, a certified crop advisor, agronomist, university crop extension publication, or apply according to recommendations in your approved nutrient management plan. Do not exceed application rates that could be harmful based on soil type, crop sensitivity and fertilizer placement.

The Directions for Use of the product must be followed carefully. It is impossible to eliminate all risks inherently associated with the use of this product. Crop injury, ineffectiveness, or other unintended consequences may result from many factors including, without limitation, manner of use or application, weather, combination with other products, or crop conditions. All such risks shall be assumed by the product user.
