Mosaic Honors Local Contractors as Part of Global Safety Effort
Company Hosts Sixth Annual Safety Recognition Luncheon

TAMPA, FL, April 15, 2013 – The Mosaic Company achieved its highest safety performance in its nine year history in 2012 and recently recognized 112 local contractors for their role in the accomplishment. As part of its relentless pursuit of an [injury-free workplace](#), Mosaic tracks and reports contractor safety performance. The local contractors with exemplary safety records were honored during the company’s sixth annual Contractor Safety Recognition Luncheon held at the Bartow Civic Center on April 2, 2013.

The contractors were recognized for achieving safety excellence and leadership through demonstrated safety performance during the past year. To be eligible for an award, companies were required to have an Incident Rate that met or exceeded the Mosaic target; demonstrate safety leadership and safety behavior; fulfill all reporting requirements in the contractor website (hours, safety meetings, inspections/audits, etc.); receive positive audits and assessments from Mosaic; and have more than 2,000 on-site hours.

“Because one injury is one too many, we work collectively to ensure our most valuable asset – our people – is protected,” said Bill Shelton, Director, Health, Safety and Security – Phosphates and Supply Chain.

“These contractors exemplify dedication to protecting the health and safety of employees, contractors, customers and communities.”

Contractors were recognized at three levels: Gold, Silver and Bronze. Those who met the criteria during the 2012 calendar year received a Bronze award, those who met the criteria for three consecutive years received a Silver award, and those who met the criteria for five consecutive years received a Gold award.

Gold recognition was awarded to:	Silver recognition was awarded to:	Bronze recognition was awarded to:

About The Mosaic Company:

The Mosaic Company, through its Florida-based subsidiary Mosaic Fertilizer, LLC, is the world’s leading producer of phosphate crop nutrients. America’s farmers rely on Florida phosphate to help grow their food crops. Phosphate is a natural product for which there is no man-made substitute, making phosphate reserves in Florida of strategic importance to critical sectors of the state and national economy, including farming, manufacturing, shipping, trucking and rail. Mosaic employs more than 3,000 Central Florida residents, and tens of thousands of Floridians work in other jobs dependent upon the industry. For more information, go to www.mosaicco.com/florida.
