Every day, Mosaic puts science to work right here in our community. Our reclamation team and ecologists use the latest technology and scientific methods to reclaim formerly mined lands, creating natural corridors for native wildlife and even reviving streams that haven’t existed for over a century. As a global leader in reclamation ecology, Mosaic is pioneering new environmental approaches to create vital habitats and land uses for future generations — both ours and nature’s. Ashlee, a Mosaic ecologist, works to reclaim land like the 500-acre wetland located at the north fork of the Manatee River. This freshwater marsh has become a sanctuary for various plant and wildlife species.
