

Making green,
clean energy is

our
job

Marcos Ortiz, Engineering Superintendent
Florida phosphate operations

As a superintendent at Mosaic's fertilizer manufacturing operations, I help ensure we produce top-quality phosphate crop nutrients for our farmers in America and all over the world. I also manage a team that converts excess steam into power — enough to run our Florida manufacturing plants and then some. The process, called cogeneration, requires no fossil fuels and releases zero carbon dioxide emissions. Every day, we explore new ways to conserve natural resources and reduce our energy usage even further.

We help the world grow the food it needs.
